FEATURED ENGINEERING PROJECTS

- AI Prompt Studio & Generative Workspace** [React 19, TypeScript, Express, Google GenAI SDK, Tailwind CSS]
Engineered an interactive developer sandbox for exploring Google Gemini multimodal models. Features real-time parameter tuning (temperature, top-p, system instructions), automated token tracking, prompt templates, and streaming responses with markdown formatting.
- Wanderlust — Full-Stack Travel Marketplace** [Node.js, Express, MongoDB, Mongoose, EJS/React, Cloudinary, Mapbox]
Architected a production-ready rental booking application with MVC architecture, session authentication, cookie management, reviews/ratings engine, geolocation geocoding with Mapbox, and responsive modern layout.
- Police Station Management & Automated FIR System** [Java (OOP), JavaFX / Swing, Relational Database (SQL), JDBC]
Developed an enterprise desktop information system applying OOP principles (Inheritance, Polymorphism, Encapsulation). Includes digitized First Information Report (FIR) logging, case status dispatch, and role-based officer permissions.
- High-Performance Data Structures & Algorithms Suite** [C++, Standard Template Library (STL), Custom Memory Allocators]
Implemented self-balancing AVL trees, Red-Black trees, graph traversal algorithms (Dijkstra, BFS, DFS), and cache-conscious data structures with automated benchmarking against standard libraries.
